

o oddziaływaniu chmur z aerozolem atmosferycznym

Sylwester Arabas

jak powstają chmury?

- Coulier 1875: „Note sur la nouvelle propriété de l'air”
- Aitken 1880: „On Dust, Fogs and Clouds”
- ...

WIKIPEDIA

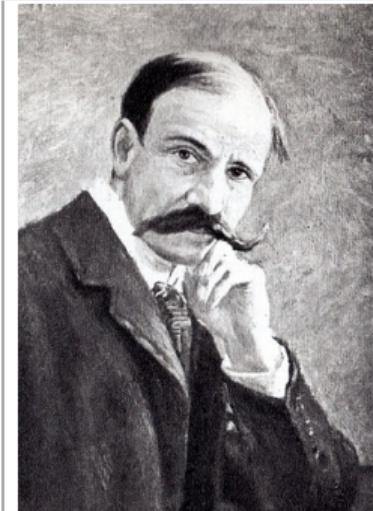

Maurycy Pius Rudzki

Maurycy Pius Rudzki (b. 1862, d. 1916) was the first person to call himself a professor of geophysics. He held the Chair of Geophysics at the Jagiellonian University in Kraków, and established the Institute of Geophysics there in 1895. His research specialty was elastic anisotropy, as applied to wave propagation in the earth, and he established many of the fundamental results in that arena. [1]

W swobodnej atmosferze do skroplenia potrzebne są „jądra skroplenia”, dokoła których para skupia się i zamienia w wodę ...

Po miastach powietrze zawiera dużo dymu, molekułów kwasów i.t.d. Wszystko to są hygroskopijne ciała skupiające parę nawet wtedy, gdy powietrze nie jest jeszcze nasycone ...

Wszystko, co dotychczas powiedzieliśmy, odnosi się jeno do samotnych kropel. Tymczasem, jak to słusznie zauważył M. Smoluchowski zwykle spada nie jedna kropla, ale całe mnóstwo...

Stevens and Feingold, 2009 (Nature)

doi:10.1038/nature08281

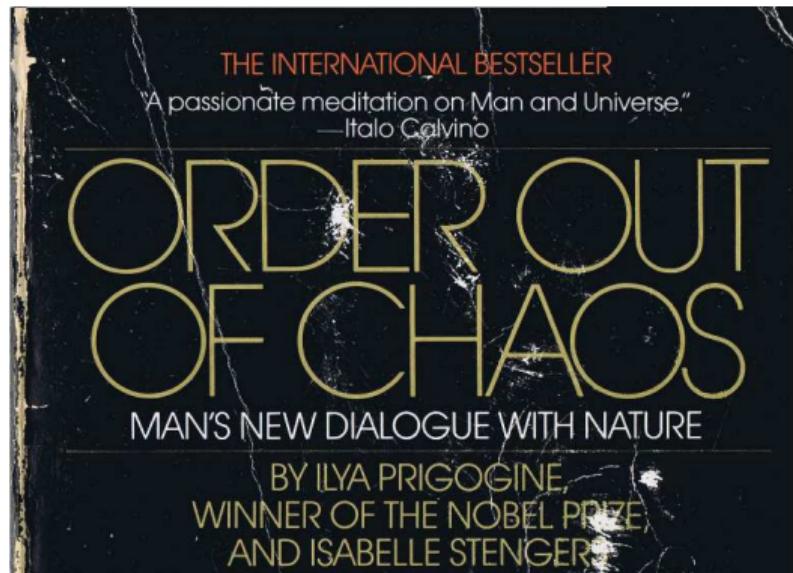

doi:10.1038/490040a

“there is something captivating about the idea that fine particulate matter, suspended almost invisibly in the atmosphere, holds the key to some of the greatest mysteries of climate science”

... micro vs. macro ...

... micro vs. macro ...

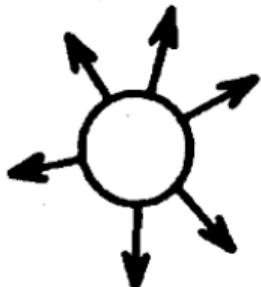

Prigogine and Stengers 1984

"Much of this book has centered around the relation between the microscopic and the macroscopic. One of the most important problems in evolutionary theory is the eventual feedback between macroscopic structures and microscopic events: macroscopic structures emerging from microscopic events would in turn lead to a modification of the microscopic mechanisms."
