#### droplet growth laws in a nutshell: mass and heat diffusion

 $1 + A/r_{w} - \varkappa r_{d}^{3} / r_{w}^{3} - c_{0} + c_{2} \xi_{c}^{2}$ 

 $2\times(1 \mu m)^2$ 

doi: 10.5194/npg-24-535-2017

RH<sub>c</sub>-RH

Fick's and Fourier's laws combined spherical geometry

$$\dot{r}_{\mathsf{w}} = \frac{1}{r_{\mathsf{w}}} \frac{D_{\mathsf{eff}}}{\rho_{\mathsf{w}}} (\rho_{\mathsf{v}} - \rho_{\circ})$$

non-dimensional numbers:

$$RH = \rho_{\rm v}/\rho_{\rm vs}$$
 
$$RH_{\rm eq} = \rho_{\rm o}/\rho_{\rm vs}$$

$$\dot{r}_{\mathrm{w}} = rac{1}{r_{\mathrm{w}}} D_{\mathrm{eff}} rac{
ho_{\mathrm{vs}}}{
ho_{\mathrm{w}}} \left( \mathrm{RH} - \mathrm{RH}_{\mathrm{eq}} \right)$$

$$_{\text{c}_0=\text{RH}_c}$$
  $_{\text{RH}_eq}$   $\approx 1+rac{A}{r_{\text{w}}}-rac{\kappa r_{ ext{d}}^3}{r_{ ext{w}}^3}$ 

maximum at  $(r_c, RH_c)$ :

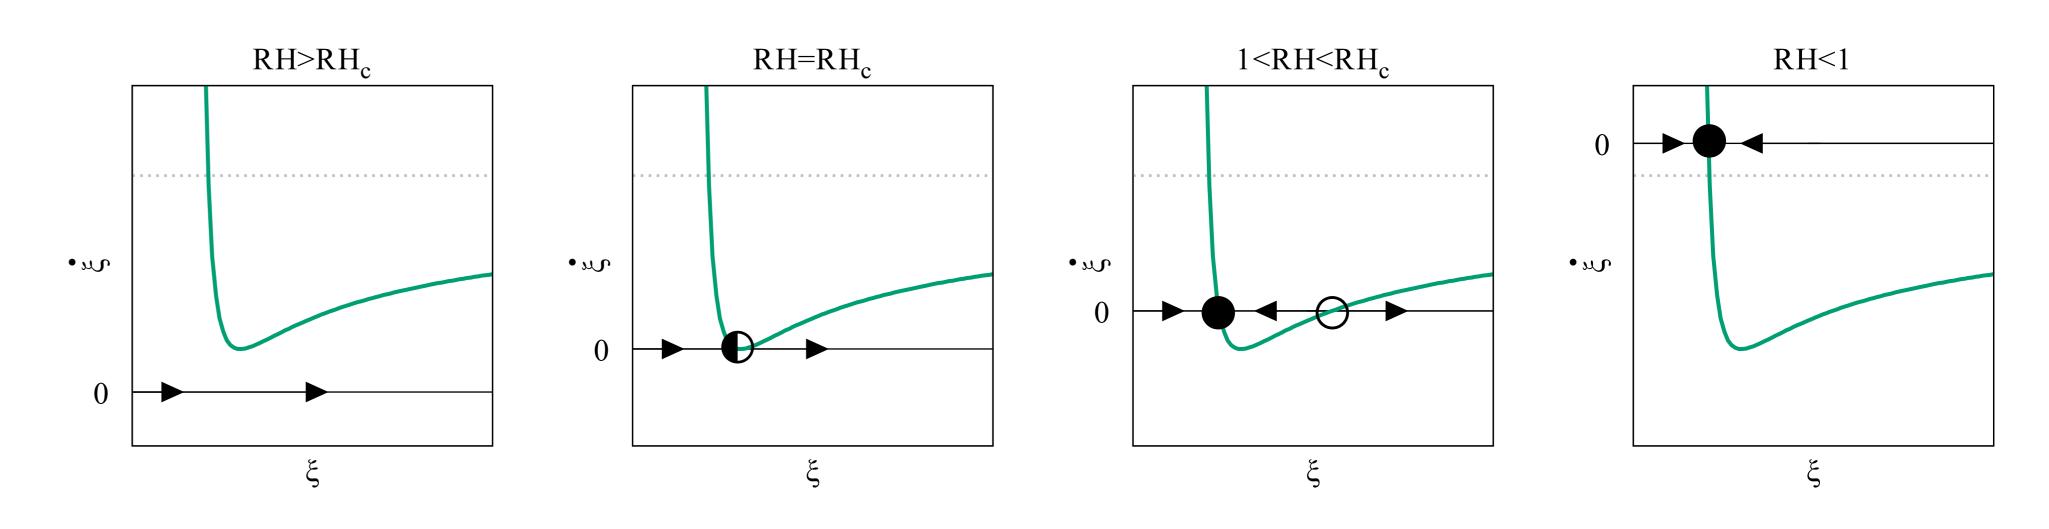

$$r_{c} = \sqrt{3\kappa r_{d}^{3}/A}$$

$$RH_{c} = 1 + \frac{2A}{3r_{c}}$$

$$\xi = r_{\rm w}^2 + C$$

$$\dot{\xi} = 2D_{\mathrm{eff}} \frac{
ho_{\mathrm{vs}}}{
ho_{\mathrm{w}}} \left( \mathrm{RH} - \mathrm{RH}_{\mathrm{eq}}(\xi) \right)$$

## phase portrait of the system: flipped Köhler curve

#### saddle-node bifurcation at Köhler curve maximum

$$\mathsf{RH}_{\mathsf{eq}}(\xi_{\mathsf{c}}) = c_0 + c_1 \xi_{\mathsf{c}} + c_2 \xi_{\mathsf{c}}^2 + \dots \quad \dot{\xi}_{\mathsf{c}} \Big|_{\xi_{\mathsf{c}} \to 0} \sim \frac{\mathsf{RH} - \mathsf{RH}_{\mathsf{c}}}{A/(4r_{\mathsf{c}}^5)} + \xi_{\mathsf{c}}^2 \qquad \dot{x} = r + x^2$$

## bifurcations (and catastrophe) in the RH-coupled system

simple moisture budget (const T,p):

$$\dot{R}H \approx \frac{\dot{\rho}_{V}}{\dot{\rho}_{VS}} = -N \underbrace{\frac{4\pi \rho_{W}}{3\rho_{VS}}}_{\alpha} 3r_{W}^{2}\dot{r}_{W}$$

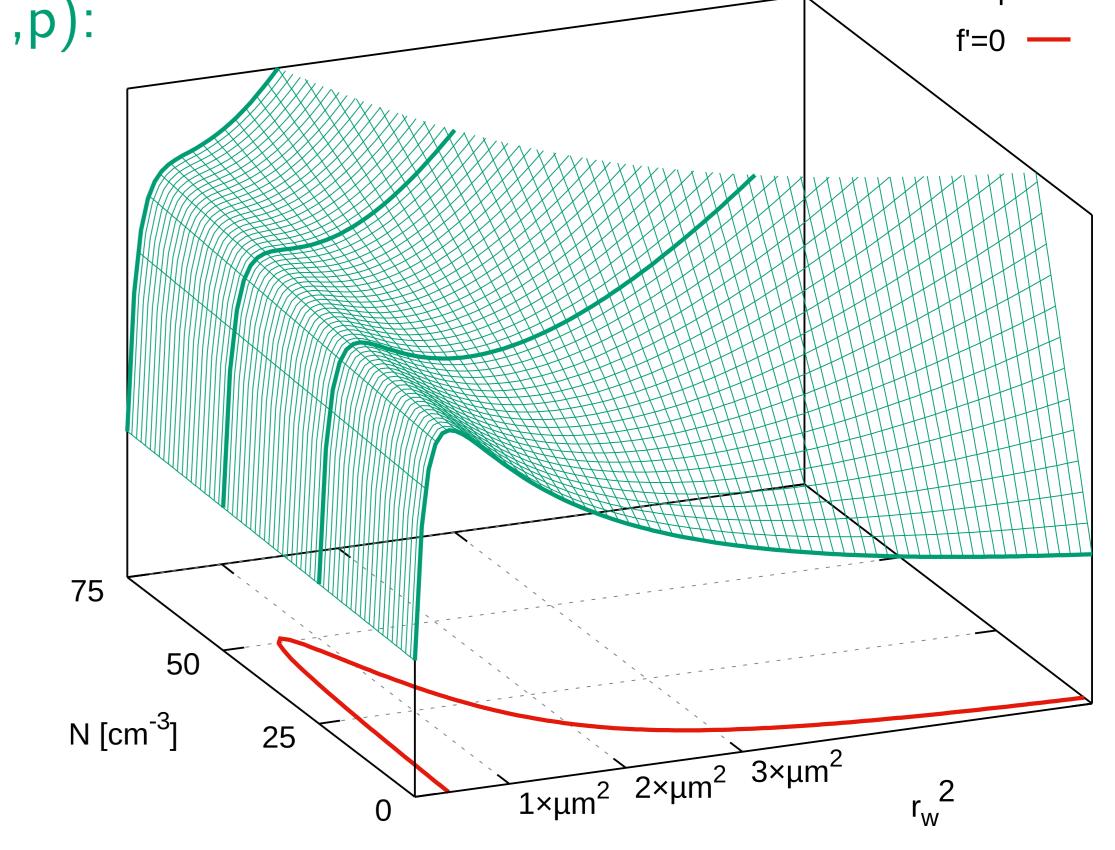

integrating in time:

$$RH = RH_0 - \alpha N r_w^3$$

new phase portrait:

$$\dot{\xi} \sim (RH_0 - 1) - \underbrace{\left(\frac{A}{\xi^{\frac{1}{2}}} - \frac{\kappa r_d^3}{\xi^{\frac{3}{2}}} + \alpha N \xi^{\frac{3}{2}}\right)}_{f}$$

regime-controlling params: RH, N

$$\operatorname{sgn}(f') = \operatorname{sgn}\left(\kappa r_d^3 - \frac{A}{3}r_w + \alpha N r_w^3\right)$$
